# Introduction

---

This list includes all “C” numbers allocated to date in the Cole numbering system of Lithops, and approximate locality data in respect of each. The list is designed for use with a Topographical Map of South Africa and Namibia, scale 1 : 2 500 000, and overall size 1110 x 860 mm (43" x 34"). The following abbreviations and signs are used in the list:

<b>N</b>	North	<b>(B)</b>	Botswana
<b>S</b>	South	<b>(N)</b>	Namibia
<b>W</b>	West	<b>(SA)</b>	South Africa
<b>E</b>	East		
<b>km</b>	Kilometer		
<b>TL</b>	Type Locality	*	Published name, in synonymy

Estimated distances are direct, by crowflight, but only very approximate, in minimum units of 5 km. Directions also are approximate, only 16 points (minimum compass bearings 22.5 °) being indicated. The margin of error in distance may be 10 km or more, and in direction as much as 15 °.

It is not possible, on a map of 1 : 2 500 000, to indicate distances or directions more accurately. In the interests of conservation it would, in any case, be preferable not to do so; accordingly, more precise information than that provided here will not be made available.

The locality data listed here makes it possible for the known distribution of any species of Lithops, as represented in the Cole numbering system, to be plotted on the map. Our objective has been, as far as possible, to include all peripheral localities in our collection, but not necessarily all those within the periphery. However, we have confirmed scores of other localities, not collected because the plants there do not present any significant variations from the type(s), and they are therefore not included in the list. We have on record also hundreds of other reported localities which we have not yet been able to confirm. A vast amount of field research remains to be done.

Localities are indicated in relation to one or occasionally two recognized centres named on the map. Sometimes, when this makes for more accurate indication of directions, different localities which are fairly near to one another may be indicated by reference to two or more different centres. For example, the localities C042, C043, C044, C045, C057 and C283, are all within a radius of less than 10 km, but it proves more convenient to indicate some of them in relation to Upington, others in relation to Keimoes.
